## **Abstracts**

Global Calendered Polyvinyl Chloride Flexible Films Market is valued approximately USD 16.00 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 5.30% over the forecast period 2022-2028. Calendered PVC is made by melting PVC, plasticizer, and colorant. Calendering rollers then press the molten components to obtain the appropriate width, thickness, and surface polish of the film. Because of its lightweight, sturdiness, and abrasion resistance, calendered polyvinyl chloride flexible films are employed in a variety of end-use industries. Furthermore, they are corrosion-free, resistant to all inorganic substances, and can survive harsh weather conditions. According to a report published by the New Plastics Economy Global Commitment, approximately 60% of the signatory group, which includes packaging product manufacturers and retailers who use single-use cutlery, Polystyrene (PS), polyvinyl chloride, or carbon black, have planned to remove these plastic packaging materials from their portfolios as there is a significant global shift toward using reusable/recyclable packaging materials from conventional packaging mat. Factors such as rising worldwide demand from the building and construction industries, as well as rising demand for calendered polyvinyl chloride (PVC) flexible films in food and beverage packaging applications, are expected to drive the global expansion of this market. However, uncertainties in supply of raw materials impedes the growth of the market over the forecast period of 2022-2028.

The key regions considered for the Global Calendered Polyvinyl Chloride Flexible Films Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of

the World. Asia Pacific emerged as the market leader. The market in the area is predicted to expand significantly because to increased uses of calendered PVC flexible films in dialyzing, IV & pharmacology, and urine bags, among others. Furthermore, increased healthcare expenditure in key nations such as China, India, and Japan are driving demand for high-quality medical equipment and components from hospitals. Furthermore, rising hospital care and safety regulations are likely to drive the market throughout the projection period.
