Cancer diagnostics involves identification of different biomarkers, proteins, and some signs that lead to the identification of the presence of a cancerous tumor. Growing prevalence of various types of cancer such as breast, lung, prostate and others are fueling demand for cancer diagnostics globally. According to American Cancer Society, in 2022, about 287,850 new cases of invasive breast cancer will be diagnosed in women and about 43,250 women will die from breast cancer. Also, as per Canadian Cancer Society, 29,600 citizens were diagnosed with lung cancer in 2021 in Canada. Additionally, growing public and private initiatives regarding early diagnosis of cancer and rising number of cancer diagnostic center globally are the factors fueling demand for cancer diagnostic. Furthermore, technological advancements in diagnostic technologies and rising health consciousness among people are expected to fuel growth in the market during forecast period. In November 2021, Siemens Healthineers unveiled Magnetom Free, which is a cost-effective whole-body MRI scanner, designed to enable significantly better access to magnetic resonance imaging globally. However, high cost of cancer diagnostics and lack of proper healthcare infrastructure in developing countries are projected to restrain growth in coming years.

The geographical regions considered for the global Cancer Diagnostics market analysis includes Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is leading the global market in terms of revenue due to continuously growing cancer patients and fast adoption of latest technologies. Whereas, Asia Pacific is expected to grow with the highest growth rate during forecast period due to growing awareness regarding cancer diagnostics and government funding for cancer diagnostic centers.
