Abstracts

Global Cancer/Tumor Profiling Market is valued approximately USD 5.9 billion in 2018 and is anticipated to grow with a healthy growth rate of more than 10.7 % over the forecast period 2019-2026. Growing focus for the development of personalized medicine, growing utility of biomarkers in tumor profiling and increasing R&D investments in cancer are some major trends that are responsible for the wide adoption of Cancer/Tumor Profiling globally.

Global Cancer/Tumor Profiling market is majorly driven by increasing prevalence of cancer globally. The World Cancer Research Fund International (WCRFI) estimates that, nearly 2 million new cases of breast cancer are being detected every year and breast cancer is considered as the most common form of cancer in women globally. American Cancer Research Society (ACRS) anticipates by 2030, incident rate of breast cancer is expected to reach over 9.9million cases with over 5.5million annual deaths, primarily due to aging population. Incident rates of breast cancer are highest (46% in 2016) amongst women aged between 45-65 years across the globe. ACRS studies reveals that, with aging population prevalence rate of breast cancer amongst elderly women aged 55 years and above is bound to increase. Breast cancer represents 12% of all new cases of cancer amongst women in 2016, according to WCRFI. Europe leads

the world with highest number (25% in 2016) of new breast cancer cases in the world followed by North America and Asia Pacific according to National Cancer Institute (NCI), USA. Belgium, Denmark, France, Netherlands, Bahamas and USA are countries with highest rates of breast cancer in the world according to WCRFI survey in 2016. Global economic burden due to breast cancer stood at \$5.7billion in 2016 according to ACRS. However, ACRS estimates, the economic burden on breast cancer is anticipated to reach over \$8 billion by 2026. Increasing number of breast cancer cases would supplement global cancer/tumor profiling market for the forecasted period. However, lack of skilled professionals is a major factor that impede the growth of the Cancer/Tumor Profiling market over the forecast period.

On the basis of segmentation, the Cancer/Tumor Profiling market is segmented into technology, cancer type and application. The technology segment of global Cancer/Tumor Profiling market is classified into immunoassays, hybridization, next generation sequencing, mass spectrometry and other technologies of which immunoassays accounted for the largest market share owing to its cost-effectiveness, high sensitivity as well as technological advancements in this technology would propel the growth of the immunoassays. Based on the cancer type segment, the cancer/tumor profiling is bifurcated into breast cancer, lung cancer, prostate cancer, colorectal cancer, melanoma cancer and other cancer of which breast cancer segment holds the leading position owing to the increased awareness about breast cancer diagnosis, rising prevalence of breast cancer. The application segment includes clinical application and research application.

The regional analysis of Cancer/Tumor Profiling Market is considered for the key regions such as North America, Europe, Asia Pacific, Latin America and ROW. North America have occupied major share in the global Cancer/Tumor Profiling market. The major reasons for the dominance of North America are rising prevalence of cancer along with the high rate of adoption in this region. Whereas, Asia-Pacific is expected to emerge as the fastest growing region in terms of market share. The growth of Asia-Pacific region is witnessed owing to rising number of contract research organizations (CROs), growing demand for better healthcare services and increasing incidences of cancer.
