## Abstracts

Global Cannabis Cultivation Market is valued approximately at USD 141.62 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 14.5% over the forecast period 2021-2027. Cannabis plants have psychoactive properties, each part of the plant (seed, dried leaves and other parts) are useful and generally used for medicinal and recreational purposes. Growing trend of legalizing cultivation and processing of hemp in various countries is growing the application of cannabis in various products such as pharmaceuticals. Growing legalization and adoption of cannabis for the treatment of chronic disease, rising use of cannabis in pharmaceuticals, nutraceuticals, food and beverages and cosmetics and rising cultivation area for cannabis is growing the market of cannabis worldwide. For instance, in June 2021, governor of Connecticut (United States), signed a legislation for legalizing the adult-use of cannabis in Connecticut. The law includes provisions such as, possession of cannabis among adults age 21 and over will be legal in Connecticut from July 1, 2021, from October 2021, patients participating in Connecticut's medical marijuana program will be permitted to cultivate up to six cannabis plants and others. Furthermore, rising prevalence of chronic diseases such as cancer, diabetes and others are expected to fuel the demand for cannabis in pharmaceuticals market. For instance, according to American Cancer Society, the number of new cancer cases in United States was 1,762,450 which was expected to reach 1.8 million in 2020. However, demand and supply gap and legalizing medical cannabis for only selected indications may hamper the growth during forecast period.

Among Asia Pacific, North America, Europe, Latin America, and Rest of the World, Asia Pacific is the dominating region across the world in terms of revenue and is also expected to grow at a fastest pace during forecast period due to rising awareness about cannabis, growing patient pool for the marijuana treatment and its medical benefits coupled with suitable climatic condition in the region.
