## **Abstracts**

Global Cannula Market is valued at approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2028. Cannula is a thin tube that doctors insert into a person's body cavity, such as their nose, or into a vein. Doctors use them to drain fluid, administer medication, or provide oxygen. Increasing number of surgeries with the ageing population, increasing health consciousness among the peoples across the globe has led to the adoption of Cannula across the forecast period. For Instance: According to the American Society of Plastic Surgeons (ASPS), almost 18 million people underwent surgical and minimally invasive cosmetic procedures in the United States in 2018. Also, with the growing obesity rate, the adoption & demand for Cannula is likely to increase the market growth during the forecast period. However, an uncertain regulatory framework impedes the growth of the market over the forecast period of 2022-2028.

The key regions considered for the Global Cannula Market study include Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading region across the world in terms of market share owing to the advancement in healthcare facilities, increased investment in R&D. Whereas, Asia-Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2022-2028. Factors such as increasing awareness about MIS techniques, increasing disposable

income would create lucrative growth prospects for the Cannula market across Asia-Pacific region.
