## **Abstracts**

Global Carbon Dioxide Market is valued at approximately USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2021-2027. Carbon dioxide is fundamentally a greenhouse gas, which is crucial for the Earth's ecosystem and can be recovered from flue gases, as a by-product from the manufacture of hydrogen for ammonia synthesis, from limekilns, and many other sources. The increased consumption from the food & beverage industries, rising demand in the oil and gas industry has led to the adoption of Carbon Dioxide across the forecast period. For Instance: as per the U.S. Department of Energy (DOE), around 137 billion barrels of potential oil resources are recoverable through carbon dioxide, with close to 67 billion barrels recoverable at the cost of around US\$ 85 per barrel. Also, with the increasing use of carbon dioxide in crop growth, the adoption & demand for Carbon Dioxide is likely to increase the market growth during the forecast period. However, increasing carbon emissions & high cost of carbon capture & storage (CCS) technology impedes the growth of the market over the forecast period of 2021-2027.

The key regions considered for the global Carbon Dioxide market study includes Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading region across the world in terms of market share owing to the presence of a large number of oil & gas production and refineries. Whereas, Asia-Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2021-2027. Factors such as easy availability of resources and raw materials to produce industrial carbon dioxide would create lucrative growth prospects for the Carbon Dioxide market across Asia-Pacific region.
