## **Abstracts**

Global Carbon Fiber Prepreg Market is valued at approximately USD 8.5 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 10.5% over the forecast period 2022-2029. Carbon Fiber Prepreg carbon composite prepregs are created with the aid of thermoset resins, such as Epoxy, Phenols, Thermoplastics, and polyimide. The two principal procedures utilized to produce Prepreg carbon fiber are the Hot Melt Process and the Solvent Dip Process. Prepreg carbon fiber reinforcement is one of the most cutting-edge methods for creating composite components. It is cured under heat and pressure to generate high-quality parts with a great seismic performance and low resin content. Rapid industrialization, numerous product developments, investment in research and development, an increase in the usage of energy sources, and increased demand for carbon fiber prepreg in end-user industries are the main factors expected to propel market expansion over the forecast period.

The sports and leisure sector accounted for almost 12,000 metric tons of the total global demand for carbon fiber. Over the past two decades, there has been a marked increase in the usage of renewable energy worldwide. In 2021, consumption levels came very close to 40 exajoules/petajoules. Another important component driving space increase is Rapid Industrialization. Additional factors, such as numerous product developments and significant research and development (R&D) efforts, are anticipated to fuel the market

even more. Major trends that spur market expansion include an increase in merger & acquisition activity and new launches. However, the high cost of Carbon Fiber Prepreg stifles market growth throughout the forecast period of 2022-2029 .

The key regions considered for the Global Carbon Fiber Prepreg Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America dominated the Market and is projected to growth grow through the forecasted period. The region's market is developing because of the increasing use of carbon fiber prepreg in the manufacture of military, commercial, and transport aircraft. Asia Pacific is anticipated to increase rapidly over the course of the projected period because of the region's expanding aerospace and automotive sectors. The region's market is primarily driven by the growing need for energy, which has increased investment in renewable energy, particularly wind.
