Abstracts

Global Cardiac Assist Devices Market is valued approximately USD XXX billion in 2020 and is anticipated to grow with a healthy growth rate of more than XXX% over the forecast period 2021-2027. Cardiac Assist Devices or CADs are the heart pumping devices that work along-side heart and are used to stabilize the pumping ability and proper maintenance of the blood flow in the body. Increase in the government funding in the research & developmental activities and increasing cases of heart failures and other cardiovascular diseases (CVD's) are the factors contributing to the market growth. For instance, according to World Health Organization (WHO), approximately 17.9 million people died from CVDs in the year 2019 thus representing 32% of the accumulated deaths worldwide. Of these 17.9 million deaths, there were 85% of the deaths that were due to heart failure. However, high costs involved in the treatment of CVD's impedes the growth of the market over the forecast period of 2021-2027. Also, increasing technological innovations are likely to increase the growth of the market in the forecasting period.

The regional analysis of global Cardiac Assist Devices market when considering for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World has led to the analysis that North America is a significant region across the world in terms of market share owing to rising prevalence of CVDs. Whereas, Europe is anticipated to exhibit the highest growth rate over the forecast period 2021-2027.

Factors such as expansion of health care industries coupled with huge government funding in the research and developmental activities would create lucrative growth prospects for the Cardiac Assist Devices market across Asia-Pacific region.
