Global Cardiovascular Anastomosis Devices Market is valued approximately USD 1.1 in 2021 and is anticipated to grow with a healthy growth rate of more than 6.5% over the forecast period 2022-2028. Anastomotic devices are becoming more common as a safe and quick way to connect the saphenous and aortic arteries. In response to the growing awareness and demand for these devices, medical technology companies are releasing innovative goods to the market. Only emergency cases, such as acute aortic dissections, were allowed to be treated during the peak of the COVID-19 pandemic, with patients being treated according to surgical priority while all elective surgeries were cancelled. According to the Society of Thoracic Surgeons Adult Cardiac Surgery database, in 2020, there was a 52 percent decline in adult cardiac surgery volume and a nearly 65 percent reduction in elective cases in the United States. Cardiovascular illnesses are one of the most common causes of death worldwide. According to the World Health Organization, cardiovascular illnesses caused about 17.9 million deaths in 2019, accounting for 32% of all fatalities worldwide. According to the Centers for Disease Control and Prevention (CDC), 18.2 million persons in the United States have coronary artery disease (CAD). Around 20% of deaths in persons under the age of 65 are due to coronary artery disease (CAD). Furthermore, the number of cardiovascular procedures is predicted to climb in the next years as a result of an increase in sedentary lifestyles, as well as increased smoking, cigarette, and alcohol intake.
