## **Abstracts**

Global Cargo Bicycles Market is valued approximately USD 1.83 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 22.3 % over the forecast period 2022-2028. Cargo bikes are an environmentally friendly alternative to traditional modes of transportation for last-mile delivery and general logistical services. They have the potential to drastically reduce freight delivery trips and have an influence on the urban distribution system by providing low-cost, environmentally friendly solutions to meet the delivery needs of small-surface retailers and the HORECA (hotel, restaurant, and catering) sector. Increased need for freight delivery fleets, along with the need for ecologically friendly transportation alternatives, has fueled demand for cargo bikes in metropolitan areas. Logistics and transportation are critical to creating seamless freight deliveries and streamlining delivery in global urban infrastructure. Increased freight delivery and commodities transportation have harmed the environment by worsening pollution, noise, traffic congestion, and vibration. These circumstances have disrupted the lives of city dwellers all around the world. To address the aforementioned challenges and ensure sustainable transportation methods, cargo bikes are in high demand globally. However, higher trans-loading costs due to reduced cargo capacity restrict market expansion throughout the projection period of 2022-2028.

The key regions considered for the Global Cargo Bicycles Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. Europe has risen

to the top of the market. Government and cargo bicycle manufacturers' increased awareness and actions have affected consumers in both the business and private sectors. Several projects have been supported by European governments in order to increase the adoption of sustainable transportation solutions. In Europe, the City Changer Cargo Bicycle Project intends to encourage its use by providing an eco-friendly, healthful, space-saving, and cost-effective form of transportation for personal and commercial uses. Asia Pacific gained a significant revenue share and is expected to expand at the quickest CAGR. Countries such as Japan, China, and Singapore place a premium on developing the infrastructure needed to encourage and enable bicycle commuting. The introduction of linked cars and new technologies such as IoT and 5G has accelerated their use in premises for facility management, leasing services, and municipal services.
