## **Abstracts**

Global Cell Culture Media Market is valued at approximately USD 5.34 billion in 2022 and is anticipated to grow with a healthy growth rate of more than 16.0% during the forecast period 2023-2030. Cell culture media, referred to as growth media, is a specialized gel or liquid designed to supply isolated cells with vital nutrients and growth factors required for their survival, division, and functioning in a controlled setting outside their natural organism. It aims to closely mimic the cells' natural environment, allowing researchers and scientists to investigate cell behavior, formulate drugs, and even engineer tissues. The composition of cell culture media is carefully designed to provide the essential nutrients, growth factors, hormones, salts, vitamins, and other critical elements needed for the cells to survive and replicate. The media also contain serum, which is derived from animal blood and provides additional nutrients and growth factors. The global market growth is being driven by factors such as growth in stem cell research, emerging cell culture technologies for cell-based vaccines, surge in production of vaccines, increasing demand for monoclonal antibodies and biosimilars, coupled with the rising emphasis on personalized medicine.

Additionally, the expanding applications of gene therapies, especially in the treatment of

neurological diseases and genetic disorders, are driving the demand for cell culture media. Researchers globally are actively engaged in discovering new therapeutic options, and gene therapy is increasingly being explored in various applications. For instance, gene therapy is utilized experimentally for treating genetic disorders such as Severe Combined Immune Deficiency (SCID), Chronic Granulomatous Disorder (CGD), and hemophilia. Gene therapy relies on viral vectors to deliver genetic sequences into target cells. OptiPEAK, a chemically defined media, is optimized for superior expansion kinetics of HEK293t, supporting clinical and commercial manufacturing in various formats. Moreover, the surge in chronic diseases especially cancer has prompted extensive research projects for advanced treatments. The use of consumables, including cell culture media, in these research initiatives is contributing to market growth by meeting the demand for essential laboratory supplies. According to the World Health Organization, in 2020, it was estimated that nearly 19.3 million new cases of cancer were recorded globally, which is projected to rise and is likely to reach 30.2 million new cases by 2040. Thus, these aforementioned factors are propelling the growth of the Cell Culture Media Market during the estimated period. Moreover, the surge in adoption of the latest cell culture technology to improve cell growth and productivity, as well as growth in stem cell research present various lucrative opportunities over the forecast years. However, the unavailability of infrastructure and ethical concerns regarding cell biology research are challenging the market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Cell Culture Media Market study include Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022 owing to the expansion of the biotechnology and pharmaceutical sectors, the increasing number of vaccines based on cell culture receiving approvals, the rising prevalence of illnesses such as cancer, and the growing funding and investments made in cell-based research. Whereas, Asia Pacific is expected to grow at the highest CAGR over the forecast years. The increasing development of biopharmaceuticals, oncology, and stem cell research, as well as the surge in demand for life science research are significantly propelling the market demand across the region. Furthermore, the rise in the number of strategic activities by key industry players to expand their presence in the Asia Pacific countries is also presenting high growth prospects for market expansion. For instance, in December 2021, Fujifilm Irvine Scientific, Inc. started the construction of its new bioprocessing center in China, intending to ensure cell culture media optimization support for biotherapeutic drug development, vaccines, and advanced therapies. For instance, in December 2021, Fujifilm Irvine Scientific, Inc. announced the construction of a new bioprocessing center in China, which aims to offer comprehensive support for cell culture media optimization

in the development of biotherapeutic drugs, vaccines, and advanced therapies.
