Abstracts

Global Cell Culture Protein Surface Coating Market is valued at approximately USD 701.9 million in 2021 and is anticipated to grow with a healthy growth rate of more than 15.3% over the forecast period 2022-2029. Cell culture is a method of growing cells under controlled conditions commonly outside their natural environment. Cell culture protein surface coating is a procedure of surface coating of cell culture with protein that comprises coating the cell culture surface with protein components or extracellular matrix. This helps in enhancing the adhesion and proliferation of the cells in-vitro. The increasing demand for synthetic protein surface coating, rising focus on stem cell research, coupled with the development of the biotechnology industry are escalating the market demand across the globe.

According to the India Brand Equity Foundation (IBEF), in 2019, the Indian biotechnology industry was estimated to account for USD 63 billion, which is projected to reach USD 150 billion by 2025. Thereby, the thriving development of the biotechnology industry is exhibiting upsurging growth in the cell culture protein surface coating market. Moreover, growing investment in research and development activities, as well as rising preference for 3D cell cultures over 2D cell cultures are presenting various growth prospects, which are supporting the market expansion globally. However, high cost of cell culture protein surface coating products and disadvantages of animal-derived protein surface coating are hindering market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Cell Culture Protein Surface Coating Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America dominated the market in terms of revenue, owing to the rising focus on the development of the healthcare & research infrastructure, along with the increasing spending on drug discovery. Whereas, Asia Pacific is expected to grow with the highest growth rate during the forecast period. Factors such as growing investments in R&D activities, increasing geriatric population, as well as rising number of favorable government policies, are burgeoning the market growth in the forecasting years.
