Abstracts

Global Cell and Gene Therapy Manufacturing Market is valued at approximately USD 13.1 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 20.3% over the forecast period 2021-2027. During cell therapy, cells are developed or altered outside the body before being injected into the patient, where they grow into a living drug. During gene therapy, genes are substituted, deactivated or initiated into cells—either outside or inside the body—to treat a disease. Cell and gene therapies are conceived to terminate a disease or overturn its progress instead of simply handling the symptoms. They are often one-time treatments that may lessen the underlying cause of a disease and have the ability to cure certain conditions. Growing pipeline of cell and gene therapy is also expected to fuel the Cell and Gene Therapy Manufacturing Market. For instance, A significant number of companies are cooperating with contract manufacturers to produce their drug candidates. CMOs/CDMOs continue to develop their manufacturing capabilities to meet the rising demand for services. In May 2020,

The Thermo Fisher Scientific invested a considerable amount of USD 180 Million for the growth of its viral vector production capacity twofold. Also, supportive regulatory bodies are also propelling the market growth for cell and gene manufacturing market growth.

However, technological challenges associated with manufacturing and high cost of manufacturing may impede market growth over the forecast period of 2021-2027.

The regional analysis of the global Cell and Gene Therapy Manufacturing Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World (ROW). North America led the cell and gene therapy manufacturing market and accounted for the greatest revenue share of 43.0% in 2020. A significant number of current clinical trials coupled with the rising commitment of companies in the R&D of gene and cell therapy is the major driving factor for regional market growth. .

In Europe, multiple new cooperative research and innovation projects were launched, under Horizon 2020 initiatives. These projects include viral vector-based gene therapy trials for rare conditions. This is expected to drive the growth of cell and gene therapy manufacturing services across the European nations. A strong facility network coupled with a strong workforce in European countries is anticipated to further fuel the market growth.
