## **Abstracts**

Global Cellular Rubber Market is valued at approximately USD 7.93 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 5.91 % over the forecast period 2022-2028. Cellular rubber is a porous rubber made up of enclosed cells all around. They're made utilizing gas-developing chemicals in accordance with the expansion process. Weather resistance, low water absorption, strong tear strength, oil resistance, chemical and acid resistance, and suitability for self-adhesives are all advantages of cellular rubber. Rising demand from automotive industry, rising applications, and rise in popularity of Electric Automobiles have driven the adoption of Cellular Rubber across the projected period. For Instance: As estimated by EVAdoption, in the US the sales of electronic cars will rise from 507,710 units in 2020 to 3,000,000 by 2028. Also, investment in cold chain infrastructure and emerging trends of Bio-Based Products are most likely to boost the overall growth of the Cellular Rubber market. However, variations in the cost of raw materials and inclement weather can obstruct the market's expansion over the projection period of 2022-2028.

The key regions considered for the global Cellular Rubber market study include Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is

the leading region across the world. Rising private investment in R&D and expanding automotive industry are driving the market growth in North America.
