Abstracts

Global cephalosporin drugs market is valued approximately at \$14.1 billion in 2020 and is anticipated to grow with a healthy growth rate of about 2.6% over the forecast period 2021-2027. Cephalosporin drugs refer to a group of semi-synthetic and wide-spectrum antibiotics which are majorly used in the treatment of bacterial infections such as kidney infections, pneumonia, meningitis, bone infections, sexually transmitted diseases (STDs), etc. The global cephalosporin drugs market is being driven by growing prevalence of infectious diseases and rising demand for anti-microbials in various indications. Furthermore, increase in research and development activities for the development of efficient and safe drugs will provide new opportunities for the global cephalosporin drugs industry. For instance, according to the American Association for the Advancement of Science, in 2021, a research team at the University of Texas had developed chemical probes for the identification of an enzyme which is produced by pneumococcal bacteria and E. coli bacteria. The research also examined nutritional immunity which comes from the proteins produced by the human body in response to an infection. Also, in 2020, researchers from the University of Hong Kong discovered that infections caused by multidrug resistant superbugs (including pneumonia, bloodstream infections, wound infections, etc.) can be treated by reprocessing antirheumatic gold drug. Such research and development activities are expected to enhance the development of more efficient cephalosporin drugs to treat different bacterial infections and is expected to drive the market growth during the forecast period. However, side effects associated with cephalosporin may impede market growth over the forecast period of 2021-2027.

The regional analysis of the global cephalosporin drugs market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World. Asia Pacific is the leading region across the world in terms of market share and is also anticipated to exhibit the highest growth rate over the forecast period 2021-2027 due to factors such as easy availability of cephalosporin drugs, increased consumption of cephalosporin, increase in bacterial infection, rise in over-the-counter drugs sale, etc. in the region.
