Abstracts

Global Ceramic Filter Market is valued approximately at USD 1.58 Billion in 2020 and is anticipated to grow with a healthy growth rate of more than 13.5% over the forecast period 2021-2027. Ceramic Filter is an affordable water filtration system which filters bacteria and sediment from drinking water through tiny pores on a ceramic surface. It can be installed in households and are easy to be used as a portable filtration device. The global Ceramic Filter market is driven by surge in the water contamination and related diseases. For instance, according to the World Health Organization, every year contaminated drinking water is projected to cause 4,85,000 diarrheal deaths and more than 884 million people do not have access to safe water for drinking. The other driving factor for the market is the increasing favorable government initiatives to promote awareness regarding water sanitation. For instance, every year Indian Government conducts Swachh Survekshan, an annual survey of cleanliness, hygiene and sanitation in cities and towns across the country. Furthermore, increasing investments in water filtration programs, technology advancements in market and growing population will provide new opportunities for the global Ceramic Filter industry. However, high cost of the product and fluctuating raw material prices may impede market growth over the forecast period of 2021-2027.

The key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World are analyzed for the regional analysis of the global Ceramic Filter Market. Rest of the World is the leading region across the world in terms of market share and is also anticipated to exhibit the highest CAGR over the forecast period 2021-2027 due to clean water and wastewater treatment projects, rising petrochemical investments, rising
