Abstracts

Global Ceramide Market is valued at approximately USD 327.9 million in 2020 and is anticipated to grow with a healthy growth rate of more than 5.4 % over the forecast period 2021-2027. Anti-aging product sales have increased dramatically as a result of increased awareness of skin ageing. Ceramides are widely employed in anti-aging treatments because they can restore the integrity of the skin barrier system while also retaining skin moisture content. As a result, increased sales of anti-aging goods are predicted to boost ceramide usage in skin care products. For instance, according to figures published by the United Nations Department of Economic and Social Affairs, the population of people aged 60 and more is predicted to grow by roughly 56% between 2015 and 2030. Furthermore, rural consumers can obtain specialized products at a cheap price because of the availability of numerous internet sales channels, which has increased consumer participation. Furthermore, the rise of supermarket and hypermarket stores in countries such as Canada and the United States is attracting new consumer demographics, which is likely to boost the ceramide market. Supermarkets such as Galleria Supermarket and T&T Supermarket, for example, sell a variety of imported cosmetics and personal care goods from South Korean brands that are primarily purchased by Asian customers. However, excessive concentration of ceramide in human tissue can lead to several health issues such as cardiovascular diseases and diabetes which may impede market growth over the forecast period of 2021-2027.

The regional analysis of the global Ceramide Market is considered for the key regions such as Asia Pacific, Latin America, Europe, North America, and Rest of the World (ROW). Asia Pacific is the leading region across the world in terms of market share due

to large consumption of rice, wheat, and soybean products through food supplements and various cosmetics products in the region. Whereas North America is also anticipated to exhibit the highest growth rate over the forecast period 2021-2027, due to increasing demand for natural and organic cosmetics across the region.
