Abstracts

Global Cervical Cancer Diagnostic Market is valued approximately USD 8.7 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 4.6% over the forecast period 2022-2029. Cervical cancer is a medical condition in which cells in the cervix lining develop into a pre-cancerous mass of cells that eventually develop into tumor tissues. The Cervical Cancer Diagnostic market is expanding because of factors such as rising prevalence of cervical cancer and growing favorable government policies.

Cervical cancers that are typically screened and diagnosed in women are adenocarcinoma and squamous cell carcinoma. Its prevalence has progressively increased during the last few decades. According to the World Health Organization, Cervical cancer is the fourth most common cancer among women globally, with an estimated 604 000 new cases and 342 000 deaths in 2020. About 90% of the new cases and deaths worldwide in 2020 occurred in low- and middle-income countries. Furthermore, two human papillomavirus types (16 and 18) are responsible for nearly 50% of high-grade cervical pre-cancers. Another important component driving space increase is favorable government policies. As per U.S. Department of Health & Human Services, each year in the United States, about 13,000 new cases of cervical cancer are diagnosed and about 4,000 women die of this cancer. Hispanic women have the highest rates of developing cervical cancer, and Black women have the highest rates of dying from cervical cancer. In addition, Roche launched human papillomavirus (HPV) self-sampling solution in countries accepting the CE mark. This new solution enables a patient to privately collect her sample for HPV screening while at a healthcare facility,

following instructions provided by a healthcare worker. The clinically validated vaginal sample is analyzed with the Roche Cobas HPV test on a Roche molecular instrument. However, the high cost of Cervical Cancer Diagnostic stifles market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Cervical Cancer Diagnostic Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America dominated the market in terms of revenue, due to increased public awareness of cervical cancer diagnosis. According to the American Cancer Society, in 2023 about 13,960 new cases of invasive cervical cancer will be diagnosed and 4,310 women will die from cervical cancer. Furthermore, Asia Pacific is expected to grow with a highest CAGR during the forecast period, owing to factors such as increase in government initiatives on cancer awareness, and active participation of government and nonprofit organizations in the market space.
