Abstracts

Global Cervical Disc Prosthesis Market is valued at approximately USD 252.97 million in 2021 and is anticipated to grow with a healthy growth rate of more than 12.3% over the forecast period 2022-2028. Cervical disc Prosthesis is a replacement surgery entails removing a diseased cervical disc and replacing it with an artificial disc. The ageing of the population, rising demand for less invasive surgeries, improvements in cervical disc prosthesis technology, business strategies adopted by major players, and rising healthcare costs are some of the major factors driving this market. For instance, in February 2021, NuVasive, Inc., a pioneer in the development of spinal technology, purchased Simplify Medical, a private firm and the maker of the Simplify Cervical Artificial Disc for Cervical Total Disc Replacement. The increasing prevalence of degenerative disc disorders, an increase in the number of sports-related injuries and trauma cases, and increased product development activities are some of the key drivers influencing the market. Furthermore, lower back pain is one of the most common symptoms of an underlying spine-related illness, which increases the market's potential. Furthermore, in order to address the drawbacks of spinal fusion surgeries, non-fusion techniques such as cervical disc prostheses are gaining traction among end-users, resulting in increased demand for cervical discs globally. Economic prosperity in major developing regions would increase demand for such products, resulting in market expansion. However, high costs and risks associated with surgery are hampering the

market growth.

The key regions considered for the global Cervical Disc Prosthesis market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America dominated the global market and accounted for the largest share. Asia Pacific regional market is expected to grow at the fastest rate during the forecast period. One of the major factors driving the growth of the Asia Pacific regional market is the growing geriatric population pool. Constant improvements in quality of life and total life expectancy, owing to advancements in healthcare facilities and rising disposable income levels, also contribute to market growth.
