Abstracts

Global Cheese Culture Market is valued approximately at USD xx Billion in 2020 and is anticipated to grow with a healthy growth rate of more than xx% over the forecast period 2021-2027. Cheese Culture contains combination of specific bacteria strains which are put together in order to make cheese. The global Cheese Culture market is being driven by the rise in the consumption of cheese. For instance: according to the International Dairy Foods Association, there has been increase in per capita cheese consumption in U.S. from approximately 36 pounds per capita in 2017 to approximately 39 pounds per capita in 2019. Also, according to Statista, in 2019, the European Union consumed around 9.5 metric tons of cheese. Another driving factor is the increase in cheese product launches by the companies. For instance: in June 2021, One Planet Pizza launched frozen Cheese Culture doughballs. Likewise, in September 2021, Good Culture, a food brand launched lactose free cottage cheese. Furthermore, the rising production of dairy ingredients, surging consumption of ready-to-eat food and rising awareness among consumers regarding overall wellness of cheese culture as good bacteria, will provide new opportunities for the global Cheese Culture industry. However, presence of saturated fat in certain cheese products may impede market

growth over the forecast period of 2021-2027.

The key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World are considered for the regional analysis of the global Cheese Culture Market. North America is the leading region across the world in terms of market share due to high purchasing power of the consumers, high consumption of cheese in diet and presence of key players in the region. Whereas Asia-Pacific is anticipated to exhibit the highest CAGR over the forecast period 2021-2027, due to the high production of dairy products and introduction of new products in the region.
