## **Abstracts**

Global Chemical Distribution Market is valued approximately USD 250.4 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 5.3 % over the forecast period 2021-2027. The chemical industry creates and supplies fundamental raw material for organizations in the manufacturing and industrial sectors. These feedstocks are distributed to the end clients directly by the manufacturers or through third-party distributors. Rising trend of sustainable and green infrastructure and strong consumer purchasing power has led the adoption of Chemical Distribution across the forecast period. For instance, as indicated by a report distributed by American Chemistry Council, Inc. in June 2019, 334 new creation projects, estimated at over USD 204 billion, were launched, which exhibits a steady ascent in investment in the U.S. economy. This pattern is anticipated to result in a significant growth of the manufacturing sector, subsequently producing a positive effect on the general market. Growing environmental concerns impede the growth of the market over the forecast period of 2021-2027. Also, growing automotive, pharmaceutical, and electronics industry coupled with strong growth in the industrial manufacturing sector is likely to increase the market growth during the forecast period.

Asia Pacific, North America, Europe, Latin America and Rest of the World are the key region for regional analysis of the market. Asia Pacific arose as the main provincial market and represented 58.6% of the revenue share in 2019. Growing manufacturing activities in the region coupled with rising per capita income is expected to drive the market growth. Nations, for example, China, India, Malaysia, Vietnam, and Thailand are seeing rapid growth in various industries including automotive, electrical and

construction.
