Abstracts

Global Chemical Protective Clothing Market is valued at approximately USD 1.35 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 5.8% over the forecast period 2022-2029. Wearing chemical protection clothes would shield the person from threats such as chemical, thermal, biological, nuclear, and radiation exposure. Major driving factors for the market are rising demand for chemical protective clothing by the end-use industry, and rising research & development activities. The need for protective equipment increased as several research and development projects related to the production of vaccines, drugs, and therapies against COVID-19, and, more subsequently, black/white fungus, were conducted during the covid-19.

According to Statista, India's total exports of pharmaceuticals and medicines were USD 24.44 billion in 2020, up from USD 20.58 billion in 2019. However, the high cost of the product is restraining the market growth over the forecast period.

The key regions considered for the Global Chemical Protective Clothing Market study includes Asia Pacific, North America, Europe, Latin America, and the Rest of the World.

North America dominated the space in terms of revenue, owing to the presence of key market players in the region. The Asia Pacific is expected to grow significantly during the forecast period, owing to factors such as the rising number of end-use industries in the region.
