The Chemicals Market is continuously growing across the world over the coming years. The chemicals industry is one of the largest manufacturing industries in the world. It manufactures a variety of chemicals products by processing raw materials such as air, water, natural gas, oil, metals and minerals. Chemicals occur naturally and can be made artificially. Rising economic growth and pass-through of rising naphtha prices onto downstream chemical product prices are the driving factors of the chemicals market across the globe. In addition, surging utility of chemicals in many end user verticals such as automotive, petroleum, healthcare and mining is also boosting the market growth of chemicals. Further, surging utility of fertilizers and pesticides in agriculture is creating numerous opportunity in the market over the coming years. One of the most important advantage in the field of chemistry was the invention of 'plastics'. plastics have replaced many other materials as they handy and economical. Another two important chemicals are acids and bases. acids are present in orange and lemon which are tangy and sharp and are also present in fizzy drinks and vinegar which is used for digestion. The baking soda is acts as a medicine to put on bee stings which are acidic in nature. However, compatibility concerns & government norms and policies

over the chemical industries is one of the major restraining factor for global chemical market across the world.

The regional analysis of Global Chemicals Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World.
