Global Chiral Chromatography Column Market is valued approximately USD 99 million in 2021 and is anticipated to grow with a healthy growth rate of more than 4.5% over the forecast period 2022-2028.

Chiral column chromatography is a type of column chromatography that is usually utilized for the isolation of optical isomers. The inactive phase encompasses a single enantiomer of a chiral compound. The chiral chromatography columns are major of two types that are empty columns and pre-packed columns. These columns are utilized in

various forms of chromatography like thin layer chromatography, liquid chromatography, gas chromatography, and many others. The increasing number of technological developments in chromatography instruments, growing investments in R&D activities across the biotechnology and pharmaceutical sector, and the rising significance of chromatography tests for drug approvals are the chief factors that may accelerate the market demand across the globe. For instance, in February 2019, Showa Denko America, Inc. (US)- a subsidiary of Showa Denko K. K. (Japan) introduced the company's novel applications laboratory in New York City. This laboratory assesses samples from customers for offering top columns to be utilized for chromatography and aids in implementing long-term projects. However, the lack of skilled professionals and high instrumentation costs impedes the growth of the market over the forecast period of 2022-2028. Also, the emergence of green chromatography and increasing lucrative opportunities in emerging countries is anticipated to act as a catalyzing factor for the market demand during the forecast period.

The key regions considered for the global Chiral Chromatography Column Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to the rapid adoption of chromatography techniques among end-user industries and availability of government funding for life science R&D. Whereas, Asia-Pacific is anticipated to exhibit the highest CAGR over the forecast period 2022-2028. Factors such as rising R&D expenditure, as well as developing infrastructure for research and increasing manufacturing companies, would create lucrative growth prospects for the Chiral Chromatography Column Market across the Asia-Pacific region.
