## **Abstracts**

Global Cholesterol Monitors Market is valued at approximately USD 2.34 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 7.4% over the forecast period 2022-2029. The cholesterol monitors are devices that are used to test the level of cholesterol in patients. The key factors driving the market growth are rising rates of obesity and a geriatric population in developed countries like the U.S., Germany, and France have accelerated the cases of patients who have high levels of bad cholesterol, requiring a daily upsurge in the demand for cholesterol monitoring products worldwide. Also, the global cholesterol monitor market is anticipated to increase as a result of the rising prevalence of cardiovascular disorders, a growing focus on early diagnosis, and the significantly increasing of cholesterol monitors.

According to World Obesity Organization, in India, there has been a rise in the prevalence of overweight; in year 2019-2020, 18.7% of adults, 20% men and 17.2% women were overweight which increased to 23%, 22%, and 24% respectively by 2020-21. As a result, rising obesity will create lucrative growth for the market. Also, rising awareness and adoption of preventive healthcare would create lucrative opportunities for the market during forecast period. However, the lack of healthcare resources, an undertrained human resource, and strict safety regulations stifle market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Cholesterol Monitors Market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. North

America dominated the market in terms of revenue, owing to the growing incidence of cardiovascular disorders, coupled with the rise in aging population, and increasing preference for self-monitoring devices. Europe is expected to grow with the highest CAGR during the forecast period, owing to factors such as growing awareness related to prevention and early diagnosis of diseases, increasing obesity rate and rising technological innovation which would create lucrative growth prospects for the global cholesterol monitors market across the Europe region.
