Abstracts

Global Chromatography Resins Market is valued approximately at USD 2.05 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 8% over the forecast period 2021-2027. Chromatography resins are used in the separation and purification of proteins and other bio-molecules in biotechnology, food manufacturing, pharmaceutical and environmental analysis. Growing production of monoclonal antibodies due to rising number of critical diseases such as cancer, rising demand in food analytics, and increasing application in pharmaceutical industry for separating chiral compounds are driving the growth of the market positively. For instance, according to National Cancer Institute (United States), there were 18.1 million new cases and 9.5 million cancer-related deaths worldwide, in 2018, which is expected to reach 29.5 million cases per year and 16.4 million cancer related deaths worldwide by 2040. Furthermore, rising use in water treatment and environmental analysis is expected to boost the demand in coming years. However, lack of skilled professionals, and presence of other advance techniques such as electrophoresis may hinder the growth during forecast period.

Among Asia Pacific, North America, Europe, Latin America and Rest of the World, North America is the market leader in terms of both value and volume because of strong therapeutic monoclonal antibody market which is driving the sale of resin positively. Whereas, Europe is the region growing at the highest rate due to presence of various

pharmaceutical companies and research organizations in the region.
