Global Clean Coal Technology Market to reach USD XXX billion by 2025.

Global Clean Coal Technology Market valued approximately USD XXX billion in 2016 is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2017-2025. increasing demand for consistent and environment friendly power generation technology, rapid urbanization and industrialization are the major factor driving the growth of Global Clean Coal Technology Market. Furthermore, government initiatives to increase expenditure on environment safety, fuel cost savings and technological advancement towards the new projects. New regulations imposed on coal powered plants to restrict the emission have forced the operators to shift towards clean and highly efficient technologies for energy extraction, thus act as a fuel in the growth of market. However, the high cost of installation of plant may hinder the growth of Global Clean Coal Technology Market. Clean Coal Technology refers to the more efficient way of coal combustion resulting in lower emissions of toxic gases like nitrogen oxide and Sulphur dioxide. Clean coal technologies is used in lower nitrogen oxide burners, carbon capture & storage technologies to capture the carbon dioxide from the flue gas and dewatering lower rank coals (brown coals) to improve the calorific value, desulfurization of flue-gas, integrated gasification, catalytic reduction and electrostatic precipitators, chemically washing minerals and impurities from the coal
