Abstracts

Global Clean Room Robot Market is valued approximately at USD XX billion in 2019 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2020-2027. The robot can navigate with the help of camera, that is mounted on the roof of robot and helps to detect the position to be cleaned, estimates the path to reach the detected position and cleans the area with the help of vacuum cleaner. Clean room robots are widely used in various applications including healthcare, commercial, and other applications for cleaning windows, floors, lawns and pools. The demand for contaminant-free machines and equipment in clean rooms, and shortage of skilled workforce in manufacturing industries are the few factors responsible for growth of the market over the forecast period. Moreover, the need to pass goods and materials between areas of different environmental grades through material airlocks (MAL) will further increase the demand of the market. Furthermore, product launch and strategic alliance by market key players will create a lucrative demand for this market. For instance: on 27th December 2019, ABB launched IRB1100 robot and OmniCore™ controller for harsh environments, specially designed with the protection against water and dust. Whereas, high installation cost of industrial robots, especially for small and medium-sized enterprises is the major factor restraining the growth of global Clean Room Robot market during the forecast period.

The regional analysis of global Clean Room Robot market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. Asia Pacific is the leading/significant region across the world owing to the

presence of developing countries such as India and China and huge demand for clean room robots in the pharmaceutical industry.
