Abstracts

Global Clear brine fluids Market is valued approximately USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than 4.5 % over the forecast period 2021-2027. Clear brine fluids are a type of water-based solutions of inorganic salts used as a well-monitored fluid during the workover of well operations. During conventional drilling process, these fluids help in controlling high temperature & high pressure. Rising production of hydrocarbon, increasing enhanced oil recovery activities and increasing off-shore production has led the adoption of clear brine fluids across the forecast period. In 2020, the global consumption of petroleum and liquid fuels was 92.2 million b/d (barrel per day) and is expected to be 97.6 million b/d by 2021. As the consumption of fluids is increasing year by year, enhanced oil recovery activities and upgraded machineries are helping in the rise of production of hydrocarbons and clear brine fluids. However, variation in crude oil prices and the latest COVID-19 outbreak impedes the growth of the market over the forecast period of 2021-2027. Also, rising production of shale gas and other unconventional natural gases is likely to increase the market growth during the forecast period.

The key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the world are considered for regional analysis of global clear brine fluid market. Asia-Pacific is the significant region across the world in terms of market share owing to the region being the largest producer of crude oil in the world from countries such as UAE,

Saudi Arabia, Iraq, and more. Whereas, it is also anticipated to exhibit highest CAGR over the forecast period 2021-2027. Factors such as rising consumption volume and various technological advancement to reduce production cost & increase productivity would create lucrative growth prospects for the Clear brine fluids Market across Asia-Pacific region.
