Global Clinical Risk Grouping Solutions Market is valued approximately at USD XX million in 2019 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2019-2026. Clinical Risk Category (CRG) approach is a population classification system that uses outpatient and inpatient diagnostic and treatment codes, clinical health status, and prescription data to assign each person to a single, severity-adjusted category. Social risk category is a professional evidence-based categorical rating system that uses statistical data to identify adults and children with chronic health problems. Rising consumer awareness regarding risk management, increasing utilization of big data, and high demand for the reduction of rising healthcare expenditures are the few factors responsible for high CAGR of the market over the forecast period. Moreover, increasing physician burnout due to documentation needs along with increasing focus on AI and machine learning are few factors likely to create lucrative growth opportunities to the growth of market in the forecasting years.
