## **Abstracts**

Global Coconut Fatty Acids Market is valued at approximately USD 3.8 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 4.5% over the forecast period 2022-2028. Coconut fatty acids are fatty acids produced from coconut oil by hydrolysis and distillation. Lauric acid and saturated fatty acids such as stearic, capric, palmitic, caprylic, and myristic acids make up the majority of these fatty acids. They range in hue from white to light yellow and contain trace amounts of unsaturated fatty acids. Coconut fatty acids help to hydrate the skin while also decreasing wrinkles and fine lines, moisturising, smoothing and protecting it from pollution and UV radiation. Because of these advantages, they are becoming increasingly popular in the personal care and cosmetics industries. Furthermore, because of their strong antioxidant, anti-inflammatory, anti-fungal, and anti-microbial characteristics, they are increasingly being utilised in a wide range of personal care and cosmetics products, including body lotions, face creams, moisturisers, sunscreen, soaps, and others. As a result, the fast expansion of the personal care and cosmetics sector, as well as rising sales of the aforementioned items, are likely to provide profitable potential prospects in the worldwide coconut fatty acids market. Despite the multiple benefits connected with

coconut fatty acids, the high risk of heart and kidney-related disorders linked with the use of coconut fatty acids, having high cholesterol and high potassium content are restricting sales throughout the food and beverage market.

The key regions considered for the global Coconut Fatty Acids market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. During the forecast period, North America is expected to account for a considerable revenue share in the global coconut fatty acids market. Cosmetics and personal care items such as soaps, body creams, anti-aging creams, sunscreen, and others are in high demand, owing to rising consumer expenditure on cleanliness and body aesthetics. As a result, prominent industry players are seeking to introduce new goods and expand their production capacity to meet rising demand.
