## **Abstracts**

Global Collaboration Display Market is valued approximately USD XX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2028.

Collaborative Display is a form of a platform that facilitates people to work together irrespective of physical distance. This display is highly adopted as a medium of collaboration from a centralized location like a company's headquarters. This display is equivalent to whiteboards in digital form. The increasing demand for collaboration displays in the education sector, integration of advanced technologies with collaboration displays, coupled with the rising investments in technological developments are the primary factors that are surging the market demand across the globe. For instance, according to the India Brand Equity Foundation (IBEF), in 2018, the Indian education sector was accounted for USD 91.7 billion and the amount is increased and reached USD 101.1 billion in 2019. Moreover, in India, the edtech market is projected to reach USD 4 billion by 2025, from USD 750 million in 2020. Thereby, the rapid growth of the education sector is propelling the demand for collaboration display, which, in turn, augments the market growth worldwide. However, the higher cost of collaboration

displays in comparison with conventional whiteboards and rising adoption of smartphones and tablets in the education sector impedes the growth of the market over the forecast period of 2022-2028. Also, increasing government funding for the installation of interactive displays in educational institutes and growing applications of collaboration displays is anticipated to act as a catalyzing factor for the market demand during the forecast period.

The key regions considered for the global Collaboration Display Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to the increasing spending on technological developments, growth in end-use sectors, and rising adoption of collaboration displayed by corporate and education sectors. Whereas, Asia-Pacific is anticipated to exhibit the highest CAGR over the forecast period 2022-2028. Factors such as the high emergence of new business models, as well as growing investments from various government bodies, would create lucrative growth prospects for the Collaboration Display Market across the Asia-Pacific region.
