## **Abstracts**

Global Commercial Air Conditioning System Market is valued approximately USD 40.02 billion in 2022 and is anticipated to grow with a healthy growth rate of more than 4.5% over the forecast period 2023-2030. A commercial air conditioning system is a system designed to cool and dehumidify the air in commercial or large-scale buildings such as offices, shopping malls, hospitals, hotels, and industrial facilities. These systems are typically more complex and powerful than residential air conditioning systems to meet the higher cooling demands of commercial spaces. The rising concern about indoor air quality has a significant impact on the demand for commercial air conditioning systems. The market for commercial air conditioning systems has been steadily expanding and evolving as a result of consumer demand for innovative, energy-efficient, and environmentally friendly products. There will likely be a big demand for commercial air conditioners due to the increasing investment by governments and private companies on infrastructure across the world. The development of energy-efficient smart commercial air conditioners has increased demand for air conditioners while causing less ozone depletion or air pollution. Additionally, the demand for smart commercial air conditioners with innovative inverter technology and environmentally friendly solutions has been spurred by the increasing number of smart households and business spaces throughout the world.

Moreover, the cohesive government initiatives are anticipated to create the lucrative demand for the market during forecast period. According to the IEA in 2020, USD 66 billion in financing for energy efficiency-related initiatives announced as part of governments' stimulus packages. Unsurprisingly, a major portion (USD 26 billion) has been dedicated to the construction industry, since investments in building efficiency are anticipated to produce roughly 15 jobs for every USD 1 million spent. Additionally, adoption of smart technologies in the commercial air conditioning industry along with improvement in housing standard is anticipated to create the lucrative opportunity for the market during forecast period. However, the high installation and maintenance costs of Commercial Air Conditioning System stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Commercial Air Conditioning System Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. Asia Pacific dominated the market in 2022 owing to growing disposable income, increase in office buildings, retail malls, and other commercial locations. North America is expected to grow significantly during the forecast period, owing to increased use of energy-efficient air conditioners due to lowering energy consumption rates is expected to stimulate demand for new and improved air conditioners. The replacement of hazardous or ozone-depleting refrigerants, such as the ban on R-22 refrigerant and the transition to R-32 refrigerant from R-410A since R-32 is a far less dangerous gas for the environment, is predicted to fuel commercial AC growth in North America throughout the projection period.
