Abstracts

The global companion animal rehabilitation services market valued at USD 568.17 Million in 2023 and estimated to reach USD 1546.70 million by 2032, growing at a compound annual growth rate (CAGR) of 11.77% from 2025 to 2030. This robust market expansion is primarily driven by the increasing prevalence of musculoskeletal and orthopedic issues among pets, coupled with the rising pet humanization trend, which emphasizes the need for advanced, non-invasive therapies to improve the health and quality of life of companion animals. Rehabilitation services such as hydrotherapy, therapeutic exercises, and manual therapy are being increasingly adopted, especially for dogs and cats, due to their proven effectiveness in addressing age-related ailments, post-surgical recovery, and chronic conditions like arthritis.

Aging pets, particularly dogs, face a growing burden of conditions such as arthritis, hip dysplasia, and joint injuries, making them prime candidates for rehabilitation therapies. With approximately 20% of dogs being diagnosed with arthritis, and a significant portion of senior pets suffering from various musculoskeletal problems, the demand for rehabilitation services continues to surge. This demand is further amplified by increasing pet ownership and owners' willingness to invest in advanced veterinary care to improve the overall well-being of their pets. Additionally, rising disposable incomes and growing pet care expenditure, especially in developed regions, have paved the way for specialized rehabilitation centers offering cutting-edge treatments for pet mobility

issues and other chronic conditions.

Furthermore, the increasing number of veterinary hospitals and rehab centers, especially in North America and Europe, is contributing to the market's growth trajectory. These centers, equipped with state-of-the-art rehabilitation tools and certified practitioners, cater to the ever-growing demand for both therapeutic and post-surgical care for pets. As pet owners increasingly recognize the importance of rehabilitation services for their pets, not just for recovery from surgeries but also for the prevention of potential mobility issues, these facilities are seeing expanded services and patient volumes.

By regions, North America holds the largest market share, driven by high awareness levels surrounding pet health and an extensive network of veterinary rehabilitation centers. Europe is expected to see substantial growth in the market as well, especially in countries like the UK, where rising obesity rates in pets fuel the demand for rehabilitation services. Meanwhile, the Asia Pacific region, particularly China and India, is experiencing rapid adoption of rehabilitation therapies as public awareness surrounding animal welfare increases and more specialized facilities emerge.
