Abstracts

Global Composite Rollers Market is valued approximately at USD 0.60 billion in 2018 and is anticipated to grow with a healthy growth rate of more than 14.06% over the forecast period 2019-2026. The wide scale of applications for composite rollers have created lucrative opportunities for the growth within the global composite rollers market. The use of composite rollers is not restricted to a single process or application within the construction, it spans into a multitude of sub-domains. Further, need for lightweight rollers to optimize the efficiency of machinery and rising demand from mining and pulp & paper industries are some major factors, driving the growth of the market. For Instance: as per the Food Marketing and Technology Organization in 2018, carbon fiber rollers are considered as very light weight and serves as an optimum high-performance alternative to the aluminum and steel rollers, making it suitable for industrial use. However, higher cost of composite rollers than that of other metal rollers is beholding the confidence of users towards purchase of composite rollers globally.

The regional analysis of global Composite Rollers Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. Asia-Pacific is the leading/significant region across the world in terms of market share owing to the presence of major coal and iron ore and mineral producing countries such as China, India and Australia and others coupled with the growing flexible packaging market. Whereas, Asia-Pacific is anticipated to emerge as the fastest growing market region during the forecast period 2019- 2026
