## **Abstracts**

Global Conductive Carbon Black Market is valued approximately at USD 136.36 million in 2019 and is anticipated to grow with a healthy growth rate of more than 7.5% over the forecast period 2020-2026. The market growth is primarily driven by increasing demand across end-user industries such as paints & coatings and plastics industries across various developing regions of the world. Additionally, growth in research and development activities by market players to attain desirable characteristics of conductive carbon black material according to need of diverse end-user industries are likely to boost the growth of the market in the coming future. However, high cost associated with the conductive carbon black than conventional carbon black and presence of alternative such as silica, are expected to hamper the market growth. Conductive carbon black is used for increasing the electrical conductivity of the material in electrical devices and appliances. Improving the material's conductivity increases its mechanical properties and strength. Both these factors are expected to fuel the growth of the black carbon conductive industry in the coming years. Globally, producers in the conductive carbon black market are concentrating on opening up new subsidiaries and are purchasing business shares and other production firms to satisfy the growing demand from different end-use industries. For instance, in 2019, Tokai Carbon, along with its affiliates COBEX Polka sp., COBEX Shanghai Ltd. and COBEX GmbH, successfully purchased 100 per cent shares of COBEX Holdco GmbH.

The regional analysis of CNC Milling Machines market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. In Asia Pacific and Latin America, the conductive carbon black industries are spending

heavily in research and growth. The future development of the plastics and automotive industries in the Asia Pacific countries is projected to boost the region's conductive black carbon market.
