## **Abstracts**

Global Cone Beam Computed Tomography Market is valued approximately USD XX million in 2020 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2021-2027. Cone beam computed tomography is a medical imaging method that uses X-ray technology that constructs 3D imaging to diagnose and treat patients. In the fields of orthopaedics, radiography, dentistry, endodontics, and oral surgery, cone beam computed tomography is frequently utilized. This imaging technique is mostly used to provide detailed pictures of teeth and bones in order to assess different diseases in the nasal cavity, jaw, skeletal structures, dentition, and sinuses. The growth in the number of digital imaging operations, particularly in the field of dental industry, is driving the market. With intraoral optical scanners, 3D imaging technologies, and software programmes intended for seamless imaging device operations, dental procedures and other diagnostic imaging areas are experiencing a digital transition. According to the American Cancer Society, more than 35,000 instances of mouth, tongue, and throat cancers are identified in the United States each year, with the average age of those diagnosed being over 60 years old. According to the World Dental Federation, around 30% of adults aged 65 to 74 years have no natural teeth, a number

that is anticipated to rise as the population ages. In the forecasting years, the rising incidence rate of such oral diseases in old age range is anticipated to boost demand for digital diagnostic imaging. Furthermore, strict government rules and regulations limit the market in forecasting years of time. Whereas, adoption of advanced technology in dental industry creates opportunities for the cone beam computed treatment market in forecasting years.

The main regions of Asia Pacific, North America, Europe, Latin America, and the Rest of the World are included in the geographical analysis of the worldwide Cone Beam Computed Tomography market. Reasons such as a preventative approach to dental care and cleanliness, accessibility to independent clinics, and growing R&D efforts in digital imaging, North America held the biggest market of significant share in 2020. The need for digital imaging in dental treatment is expected to be driven by the federal financing for Medicare and Medicaid in the United States, since consumers would need to pay less out-of-pocket expenditures. Asia Pacific is anticipated to expand at the highest rate throughout the projection period, due to an increase in the number of clinics, more R&D in manufacturing, and increased knowledge about dental care. With technological developments, the healthcare infrastructure in Asia Pacific is increasing. Various countries, such as India and China, are launching campaigns to raise awareness about mouth hygiene and care.
