Abstracts

Global Congestive Heart Failure Drugs Market is valued at approximately USD 6.15 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 14.60% over the forecast period 2022-2029. Congestive heart failure (CHF) is a chronic health condition that reduces the pumping of blood in the heart and impacts the ability of the heart muscle. The CHF drugs are specially designed drugs that are used to cure this health problem and aid in increasing the ability of the heart to pump blood effectively. Factors such as the increasing geriatric population, rising product approvals, coupled with growing healthcare expenditure are reinforcing the market demand around the world.

The rising incidences of Congestive Heart Failure (CHF) is a major concern that leads to high morbidity and mortality rate. The Global Health Data Exchange registry reported that the prevalence of congestive heart failure disease was estimated to account for approximately around 64.34 million cases globally, and in the U.S., the incidences were recorded with 5.5 million in 2022. Therefore, the growing cases of CHF are acting as a catalyzing factor for market growth. In addition, the growing R&D for drug development, as well as the strong clinical drugs pipeline are offering various lucrative opportunities over the forecasting years. However, the availability of generic and off-label drugs in the market and poor reimbursement scenarios in developing countries are challenging the

market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Congestive Heart Failure Drugs Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America dominated the market in terms of revenue, owing to the rise in patient awareness, along with the rising government initiatives and implementation of several policies. Whereas, the Asia Pacific is expected to grow with the highest CAGR during the forecast period, owing to factors such as the increasing prevalence of congestive heart failure, as well as rising healthcare expenditure in the regional market space.
