Abstracts

Global Construction Repair Composites Market is valued at approximately USD 301 million in 2020 and is anticipated to grow with a healthy growth rate of more than 10% over the forecast period 2021-2027. Construction repair composites are widely used for repairs in schools, offices, hospitals, and other non-residential buildings. Construction composites are preferred due to their potential benefits including durability, strength, corrosion resistance, etc. and also cost-effectiveness. Rising number of construction repair projects in developing nations such as China and India coupled with growing population and rapid urbanization is expected to benefit the market significantly. Moreover, innovations and product launches by market players are propelling the market forward. For instance, in March 2021, Fiberon announced the launch of Wildwood composite cladding, which provides the warmth and aesthetic of wood along with high durability and flexibility. Furthermore, the development of low-cost carbon, basalt and glass fibers will help reduce the cost of composites, thus providing opportunities to the market in coming years. However, fluctuating fiber costs and recyclability issues may hamper the market growth over the forecast period.

The regional analysis of the global Construction Repair Composites Market is segmented for the key regions such as North America, Europe, Asia Pacific, Latin America, and Rest of the World (ROW). Europe is the dominating region across the world in terms of market share due to rising construction industry and increasing

urbanization in the region. Whereas North America is also emerging as a significant region for the market due to growing consumption of construction composites in bridges, water and industrial structures in the region.
