Abstracts

Global Contact Center Analytics Market is valued approximately USD 1.02 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 19.3% over the forecast period 2022-2028. Contact centre analytics can be defined as a set of tools used by various firms' contact centres to improve their operational effectiveness. These analytical tools help the contact centre industry track key performance indicators (KPIs) and derive business intelligence insights (BI). One of the key factors driving demand for contact centre analytics is the increased usage of social media platforms. Contact centre analytics systems examine customer comments posted on social media

platforms via blogs, postings, and forums, allowing businesses to analyse social media material in real time. According to the Global Web Index, 57.6% of the world's population utilises social media, with an average daily usage of 2 hours and 27 minutes as of October 2021. Regardless of the size, kind, main activity, or location of contact centres, the contact centre business area is increasingly focusing on customer experience. For example, Service Management Group, a global patient, customer, and employee experience management organisation, said in September 2021 that its cooperation with CallMiner, a conversational analytics provider, would be expanded. By combining customer interaction and speech analytics with real-time customer feedback via the smg360 platform, the former firm is bringing new insights to customer experience initiatives. Over the projected period of 2021-2027, however, the market's growth will be restricted by high investment costs and strict consumer data privacy policies and regulations.

The key regions considered for the global Contact Center Analytics Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. The market was dominated by the North American region. The presence of major players in the region, such as SAP SE, Oracle Corp., and Cisco Systems, Inc., has contributed to market expansion in North America. Over the projection period, Asia Pacific is expected to be the fastest-growing regional market. Smartphones and other mobile devices have been widely adopted as a result of rising digitalization and rising disposable income levels in the region. The regional market is predicted to increase due to the growing demand for contact centre analytics solutions among many SMEs in Asia Pacific to improve their customer experience.
