Global Contrast Injection Lines Market is valued approximately USD XX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2028. The Contrast Injection Lines are used to inject contrast media or contrast agents to improve the blood and perfusion in tissues. Contrast media or dye helps show abnormal areas inside the body during imaging procedures such as x-rays, CT scans, MRI etc. It is given by injection into a vein, by enema, or by mouth. Contrast injection lines are made up of different materials such as Polyurethane, PVC, Coextruded and nylon/urethane among others. The growing number of radiological examination procedures and increasing prevalence of chronic diseases as well as surging per capita healthcare spending are factors that are accelerating the global market demand. For instance, according to Statista – in 2020, the global market for medical x-ray was estimated at USD 12.51 billion, and this amount is projected to grow to USD 16.5 billion by end of 2025. Furthermore, as per World Health Organization (WHO)- as of 2021, around 41 million people succumb to Noncommunicable diseases (NCDs). This accounted for around 71% of all global deaths. Cardiovascular diseases account for largest number of NCD deaths, or 17.9 million deaths annually, followed by

cancers (9.3 million) deaths, respiratory diseases (4.1 million) deaths, and diabetes (1.5 million) deaths. Also, growing number of Geriatric individuals and rising advancement in the field of radiological interventional procedures are anticipated to act as a catalyzing factor for the market demand during the forecast period. However, various risks associated with insertion of contrast injection such as nephrogenic systemic fibrosis and contrast induced nephropathy impede the growth of the market over the forecast period of 2022-2028.

The key regions considered for the global Contrast Injection Lines Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to the growing prevalence of cardiovascular diseases and increasing number of radiological examination and interventional procedures. Whereas, Asia Pacific is anticipated to exhibit a significant growth rate over the forecast period 2022-2028. Factors such as rising geriatric population and surging number of diagnostics centers in the region, would create lucrative growth prospects for the global Contrast Injection Lines Market across the Asia Pacific region.
