Abstracts

Global Controlled-Release Fertilizers Market is valued approximately USD 1.7 billion in 2018 and is anticipated to grow with a healthy growth rate of more than 6.29% over the forecast period 2019-2026. Controlled release fertilizers are granulated fertilizers coated with resin or polymer restricts that release nutrients gradually in the soil. These controlled release fertilizers are water in soluble that lead to nutrients disperse in to soil more slowly. It is an effective way to control the release of nutrients in the soil within a given period. Controlled release fertilizers are commonly used in the nursery for fertilizing trees and shrubs. Rising production of fertilizer, urea products across the globe coupled with favorable government policies and regulations are key driving forces of market growth. Apart from this, product innovations in controlled-release technology and crop-specific nutrient management through precision farming is expected to create significant growth opportunity in the market over the forecast period. However, improper management of controlled-release fertilizers impedes the growth of the market over the forecast period of 2019-2026.

The regional analysis of global Controlled-Release Fertilizers market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across the world in terms of market share owing to high product awareness and usage of improved farming

methodologies in region. Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2019-2026. Factors such as would create lucrative growth prospects for the Controlled-Release Fertilizers market across Asia-Pacific region.
