Abstracts

Global Converged Data Platform Market is valued approximately USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2021-2027. Convergence in networking refers to use of one network provider for networking services for voice, data, and video in a single network offering, instead of providing a separate network for each of these services. Convergence allows a business to use one network from one provider for all communication and cloud-based services. Growing Cloud Services Industry and rising adoption of remote office infrastructure are the key drivers for the growth of Converged Data Platform market. For instance, according to The Information Technology and Innovation Foundation (ITIF)- in 2020, the Spending on global cloud computing was estimated at USD 223 billion, up from USD 190 billion in the year 2019 and cloud companies listed on U.S. markets had more than USD 1 trillion in capitalization. Also, with the increasing government expenditure on infrastructure development and surging adoption from end use industries, the adoption & demand for Converged Data Platform is likely to increase the market growth during the forecast period. However, high initial investment for deployment of Converged Data Platform impedes the growth of the market over the forecast period of 2021-2027.

The key regions considered for the global Converged Data Platform market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World.

North America is the leading/significant region across the world in terms of market share owing to increasing demand from small and medium enterprises in the region. Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2021-2027. Factors such increasing IT infrastructure and rising penetration of smart devices and internet would create lucrative growth prospects for the Converged Data Platform market across Asia-Pacific region.
