Abstracts

Global Coronavirus Diagnostics Market is valued approximately at USD XX million in 2019 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2020-2026. The emerging pandemic, novel coronavirus disease (COVID-19) is caused by SARS-COV-2 and spreads from animals to humans, and from humans to humans in general. Typically, the virus travels from the infected person's blood droplets, or the infected person's nose discharges as they cough or sneeze. First case of the disease was identified in Wuhan, China in December 2019 and since then it has spread to millions of infected areas of the world. As of 9 April 2020, the estimated number of cases of coronavirus reached 1.5 million worldwide, some 330,000 of them had survived and more than 88,000 individuals had died. A significant number of patients infected by COVID-19 reported fever and acute respiratory symptoms, according to the US Centers for Disease Control and Prevention. Findings were obtained from laboratory or clinical experiments performed on patients in the initial phase of the viral infection, centered in various countries. Specimens obtained from the blood of patients living in various regions showed a drop in the number of lymphocytes in the white blood cell count. However, the blood samples collected from critically ill patients showed a steady as well as a substantial decrease in the number of lymphocytes in the blood and an increase in the abundance of D-dimer. The diagnosis of the novel coronavirus is predictive, and for subjects diagnosed with acute coronavirus infection oxygen therapy is a key medical procedure towards the diagnosis. In addition, at the time of oxygen therapy, automatic ventilation may be used during respiratory collapse, and hemodynamic assistance is required to manage septic shock skillfully. By

providing safe automatic ventilation and non-invasive ventilation or high flow nasal oxygen, respiratory failure may be treated as per WHO's guidance of 28 January 2020. The UN's public health body has approved the inoculation and consumption of Lopinavir / ritonavir alpha-interferon, or drug.

The regional analysis of Coronavirus Diagnostics market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America contributes substantial share of the global market and anticipated a considerable growth rate over the forecast period due to developed medical infrastructure and favorable health insurance policies in most countries in the region and the involvement of the region's leading manufacturers.
