Abstracts

Global COVID-19 Sample Collection Tools Market is valued approximately USD XXX billion in 2019 and is anticipated to grow with a healthy growth rate of more than XXX% over the forecast period 2020-2026. Today's technologies, facilitate testing on an impressively extensive variety of samples collected from the human body. The basic and essential sample required for testing is a blood sample. However, samples of saliva, sputum, urine, semen, feces and other bodily fluids and tissues also can be tested. Sample collection usually takes place in a testing laboratory collection centre where trained specimen collectors (phlebotomists) are working. The trained phlebotomists collect the samples by subsequent all biosafety precautions and utilizing sample collection tools such as swabs, vials and reagent transport kits. For COVID-19, the sample will be collected in a viral transport medium (VTM) to regulate the stability of the sample & get transported in a cold chain. Further, the samples can also collect at hospitals and day clinics and even at home either self-collected or by domiciliary staff. For instance, on 21 April 2020, the U.S. Food and Drug Administration (FDA) approved the first diagnostic test with a home collection option for COVID-19. Particularly, the FDA republished the emergency use authorization (EUA) for the Laboratory Corporation of America (LabCorp) COVID-19 RT-PCR Test to allow the testing of samples self-collected by patients at home utilizing LabCorp COVID-19 Test home collection kit. Therefore, this factor is expected to accelerate the demand of COVID-19 sample collection tools. Further, rising cases of COVID-19 in developed & developing economies, along with the favorable government initiatives are the few factors responsible for high CAGR of the market over the forecast period. According to Vindobona organization, as of 21 April 2020, there were around 2,471,930 confirmed

cases of COVID-19 that have been registered throughout the world. However, limited availability of COVID-19 testing kits is one of the major factors expected to hamper the growth of the market over the forecast period of 2020-2026.
