Global Crankshaft Position Sensor Market is valued at approximately USD xx billion in 2020 and is anticipated to grow with a healthy growth rate of more than xx % over the forecast period 2021-2027. Crankshaft position sensor provides information about the position or speed of rotation of a crankshaft in an internal combustion to the engine management system used to govern ignition system parameters. The sensor is applicable in automobiles and forms an integral part in fuel systems. Increasing adoption of crankshaft position sensor in vehicles is expected to fuel the Crankshaft Position Sensor Market. Stringent vehicle emission regulations around the globe along with increasing production of automobile globally is also propelling the market growth. For instance, in September 2017, Denso launched Crankshaft position sensor for Toyota and Lexus models, ensuring its reach to approx. 5.5 million vehicles. However, high cost of research and development may impede market growth over the forecast period of 2021-2027.

The regional analysis of the global Crankshaft Position Sensor Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World (ROW). Asia-Pacific is expected to lead the market during the forecast period. Mainly responsible factor is the growth of automotive sector in China and India. Also, rapid modernization and on-going research in the region's automobile sector.

Among all the applications, automobile sector holds the largest share of the crankshaft position sensor market, so growth in automobile sector eventually fuels crankshaft position sensor market.
