Abstracts

Global Crowdsourced Security Market is valued at approximately USD 105.76 million in 2021 and is anticipated to grow with a healthy growth rate of more than 8.4% over the forecast period 2022-2029. Crowdsourced Security is a security testing system that invites a group of people to check an asset for security vulnerabilities. Moreover, business organizations use crowdsourcing for auditing the safety and security of their applications and infrastructure. Bug bounties, vulnerability disclosure programs and responsible disclosure programs are part of Crowdsourced Security. The increasing growth of IoT technologies and stringent regulatory compliance requirements as well as strategic initiatives from leading market players are key factors accelerating the market growth.

The increasing growth of the Internet of Things technologies is contributing to the growth of the Global Crowdsourced Security Market. For instance, according to Statista – in 2020, around USD 749 billion were spent on the Internet of Things (IoT) technology worldwide, and this amount is projected to grow to USD 1.1 trillion by 2023. Also, increasing incidences of data breaches across businesses and growing adoption of

cloud applications & services would create a lucrative growth prospectus for the market over the forecast period. For instance, as per Statista – in 2020, the average cost of a data breach in the United States was estimated at USD 8.64 million, further, the average cost has been increased to USD 9.44 million in 2022. In addition, the global average cost per data breach stands at USD 4.35 million. Furthermore, as per UK Government's Cyber Security Breaches Survey 2022 – in 2019, around 32% of all UK businesses reported cyber-attacks, which further increased to 39% in 2022. Around 83% of attacks in 2022 were identified as phishing attempts. However, the challenges associated with ensuring and Maintaining Crowd Quality stifle market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Crowdsourced Security Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America dominated the market in terms of revenue, owing to the increasing adoption of crowdsourcing security and the presence of leading market players coupled with stringent regulatory compliances in the region. Whereas Asia Pacific is expected to grow with the highest CAGR during the forecast period, owing to factors such as rising digitization across the industries and increasing incidences of cyber-attacks and data breaches in the region.
