## **Abstracts**

Global Dashboard Camera Market is valued at approximately USD 3.68 billion in 2022 and is anticipated to grow with a healthy growth rate of more than 9.60% over the forecast period 2023-2030. Dashboard camera is a compact video camera mounted on the dashboard or windshield of a vehicle to record the view outside the car. Dashcams are typically equipped with wide-angle lenses to capture a broad field of view, and they continuously record footage onto a memory card while the vehicle is in operation. Moreover, the increasing awareness of road safety, growing popularity of ride-hailing services and commercial fleets, and growing integration with connected car systems are anticipated to create the lucrative demand for the market during forecast period 2023-2030.

Additionally, increasing awareness of road safety plays a significant role in supporting the growth of the dashboard camera market. Dashboard cameras provide concrete evidence in case of accidents or road incidents. As awareness of the importance of evidence in insurance claims and legal proceedings grows, more consumers and businesses recognize the value of having a dashboard camera installed in their vehicles. This awareness drives demand for dash cams as a means to enhance road safety and provide accountability. For instance, in January 2024, The Ministry of Road Transport and Highways (MoRTH) in India orchestrates the National Road Safety Week annually from January 11 to 17, aiming to bolster road safety awareness. Emphasizing collective responsibility, it educates individuals on safe driving practices, urging caution and adherence to road signs. Government-led initiatives encompass seminars,

workshops, and free fatigue checks for truck drivers. Dashcams have emerged as crucial instruments for road safety, mounted on dashboards or windshields to record continuous footage, aiding in accident documentation and dispute resolution. These efforts synergize to cultivate a safer road environment and minimize traffic mishaps. Moreover, the increase in the number of road accidents and thefts, and continuous advancements in camera technology is anticipated to create the lucrative opportunity for the market. However, the rising cybersecurity concerns, and concerns about reliability and durability stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Dashboard Camera Market study include Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022 owing to the growing emphasis on road safety, rising incidence of road accidents, rising popularity of ridesharing services, and increasing use in commercial fleets. According to Insurance Institute for Highway Safety (IIHS), In 2021, the United States saw 39,508 fatal motor vehicle crashes, claiming 42,939 lives. This translated to 12.9 deaths per 100,000 people and 1.37 deaths per 100 million miles traveled. State variations were notable, with Rhode Island reporting the lowest fatality rate of 5.7 per 100,000 people, while Mississippi recorded the highest at 26.2. Similarly, Massachusetts had the lowest death rate per 100 million miles traveled at 0.71, contrasting with South Carolina's 2.08. These statistics underline the significant disparities in road safety across different regions of the country. As a result, the rising incidence of road accidents in the region is anticipated to support the market growth. Whereas, the Asia Pacific is expected to grow with the fastest growth rate during the forecast period, owing to factors such as the rising concerns about road safety, increasing incidence of accidents and insurance fraud, growing adoption of advanced automotive technologies, and supportive government initiatives and regulations in the region.
