## **Abstracts**

Global Data Acquisition System Market is valued at approximately USD xx billion in 2022 and is anticipated to grow with a healthy growth rate of more than xx% over the forecast period 2023-2030. Data Acquisition System (DAS) is a collection of hardware and software components used to gather and process data from various sources, such as sensors, instruments, and other measurement devices. The Data Acquisition System market is expanding because of factors such as the growing adoption of connected devices and surging demand for high-speed connectivity. The primary function data acquisition system is to capture, digitize, store, and analyze data in real-time analysis. DAS is implemented in various applications, including scientific research, industrial automation, automotive testing, environmental monitoring, and more.

Gateway devices serve as intermediaries between the connected devices and the central system. They facilitate data aggregation, protocol translation, and secure data transmission. According to Statista, the global number of Internet of Things (IoT) devices is expected to nearly double from 15.1 billion in 2020 to reach up to 29 billion by 2030. Furthermore, in 2030, China is going to have the most IoT devices, with over 8 billion consumer devices. Another important factor that drives the Data Acquisition System market is the increasing demand for high-speed connectivity. High-speed connectivity allows for rapid and continuous data acquisition from multiple sensors and

devices. This is especially important in applications where real-time monitoring and control are critical, such as industrial automation, process control, and autonomous systems. In addition, as per Statista, in 2023, Qatar has the world's fastest average mobile internet connection, registering at nearly 190 Mbps. The United Arab Emirates and Macau were next, with each having average median speeds of more than 170 Mbps. Moreover, growing investments in the automotive sector and rising industrial automation are anticipated to create lucrative growth opportunities for the market over the forecast period. However, risk associated with data breach and technical complexity stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Data Acquisition System Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022 owing to favorable governmental changes, significant industrial automation adoption, and new intelligent manufacturing ventures in the region. Furthermore, Asia Pacific is expected to grow significantly over the forecast period, owing to factors such as the growing presence of multiple auto OEMs and factories and stringent regulatory policies pertaining to the testing and measurement of products in the region.
