Abstracts

Global Data Centre Colocation Market is valued at approximately USD 50.33 Billion in 2021 and is anticipated to grow with a healthy growth rate of more than 13.3 % over the forecast period 2022-2029. Colocation can be defined as the placement of enterprise-owned compute, storage and networking assets in a third-party leased facility. The data centre colocation service enables an organisation to rent office space for servers, networks, or internet bandwidth in order to set up its own data centre within an existing data centre. The cost-effective and energy-efficient data centre solutions provided to users by data centre colocation have resulted in rising market demand over the forecast period.. The data center colocation market tends to grow significantly over the forecast period owing to the rising volume of data from social media and Over-The-Top (OTT) platforms.

According to Statista – as of 2020, total amount of data created, captured, copied, and consumed globally was estimated at 64.2 zettabytes. Furthermore, over the next five years up to 2025, global data creation is projected to grow to more than 180 zettabytes. Also, the rising adoption of cloud services and emergence of 5G technology would create a lucrative growth prospectus for the market over the forecast period. However, concern over data security may hinder the market growth throughout the forecast period 2022-2029.

The regional analysis of global Data Centre Colocation market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the

World. North America is expected to dominate the market share of data center collocation market owing to the presence of large number of IT industries and presence of major data center collocation service providers. For instance, in March 2019, Microsoft and Telecom Egypt collaborated to provide a Microsoft cloud network in Egypt. The collaboration is aimed to increase the customer base and extend the geographical outreach in the region. Whereas Asia Pacific is expected to grow with the highest CAGR during the forecast period, owing to factors such as increased data volume, coupled with presence of the largest IT BPO outsourcing service companies in the region.
